

PREPACKAGED SBC EXPLOSION SUPPRESSANT

DESCRIPTION

The Fike Prepackaged SBC Explosion Suppressant eliminates the hassles of transporting and weighing suppressant containers after activation. The time required for moving the suppressant containers from their installed location to a scale, weighing the container and powder, and then moving the container back to its installation location are now gone.

A Prepackaged SBC Explosion Suppressant kit provides the correct amount of Fike's standard sodium bicarbonate suppressant for refilling Fike's suppressant containers.

SHELF LIFE

The prepackaged SBC explosion suppressant is sealed in bags or pails to prevent the entrance of moisture. The suppressant has an unlimited service and shelf life as long as it is sealed in the packaging provided by Fike. Warning: substitutions shall not be made for this material.

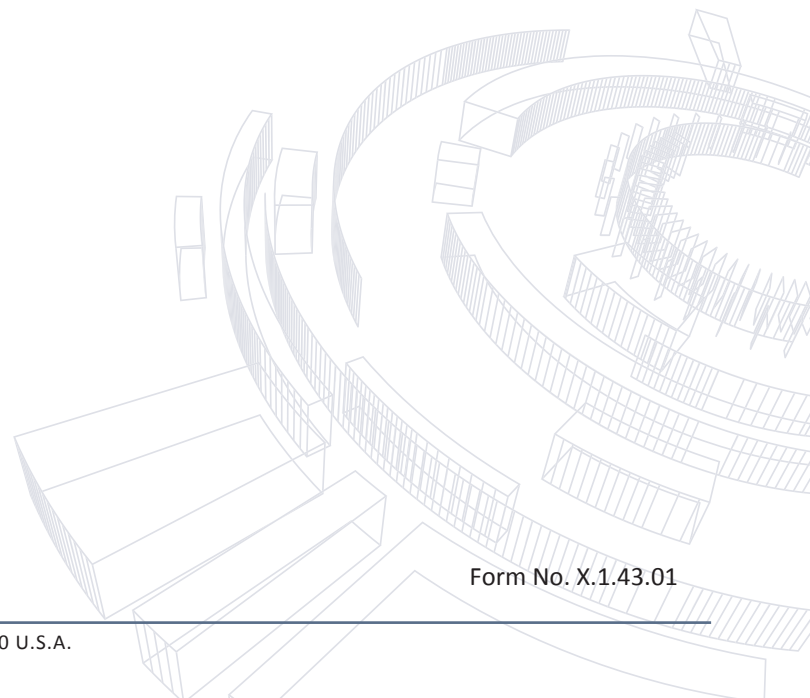

Note: Systems using Food Grade Sodium Bicarbonate or other suppressants should be ordered according to the part numbers found in the Fike Manual E06-018.

FEATURES

- SBC Explosion Suppressant Agent pre-weighed
- Suppressant Containers do not have to be moved to the shop
- Weigh scales are not required
- SBC Explosion Suppressant does not have to be ordered in fixed quantity increments
